A systematic search and critical review of measures of disability for use in a population survey of hand osteoarthritis (OA)

The dietician talks about healthy eating and emphasizes how a balanced diet can contribute to a speedy recovery and improved wound healing. Studies were included if they assessed health promotion interventions designed to reduce inequalities in health or improve the health of disadvantaged groups and could be carried out by a health service alone or in collaboration with other agencies. How can the cost be reduced? The practice of evidence-based healthcare means integrating individual clinical expertise with best available evidence from systematic research Sackett, 1996.

Targeting health and need The Bridgicare project is a three-year partnership between statutory and voluntary agencies which is developing locally based individually tailored services for older people. There are various criteria for including the input of an organization in an evaluation.

The Evaluation Handbook for Health Professionals

Hopefully it also alerts evaluators of the need to plan how their time will be used and of the need to relate the choices which they make to the resources that are allocated. Qualitative methods are particularly useful in process evaluation for answering these questions and identifying user involvement, organizational problems, pitfalls in implementation, stakeholder perceptions of success and barriers to success. Both evaluators and users of evaluations need to know which type of evaluation could be used and the advantages and limitations of each.

of employers a of concerns in which people are employed in accordance with article 47 of the fair employment and treatment (northern ireland) order 1998

For some health visitors and district nurses, lay involvement in health promotion was not acceptable. The project has raised awareness of accidents and how they can be prevented in a young population.

(northern ireland) order 1998

There is a need to undertake new ways of working which are consistent with health promotion concepts and principles. The recent demand for evidence-based medicine has led to the commissioning of a variety of meta-analyses of the literature with a view to identifying the most effective strategies for achieving health gain and at the same time curtailing the escalating costs of healthcare provision. *Health Education Journal*, 54 2 : 214 —225.

Stability and change in disease prestige: A comparative analysis of three surveys spanning a quarter of a century

The intention is to assess progress and improve effectiveness by providing an understanding of how the intervention operates and how it produces what it does rather than with assessing long-term effects or outcomes.
