## Addressing context to understand physical activity among Muslim university students: the role of gender, family, and culture

Some participants discussed guiding patients to PA resources such as information about local exercise classes or examples of places to obtain affordable exercise equipment. Myers-Walls J, Myers-Bowman KS, Posada G. Developing a nutrition and health education program for primary schools in Zambia.

## Physical activity, sedentary behaviours, and the prevention of endometrial cancer

Evidence about bone strength and density gleaned from fossils of early humans suggests that, for hundreds of thousands of years, normal levels of movement were than ours today.

## Using Qualitative Methods to Understand Physical Activity and Weight Management Among Bangladeshis in New York City, 2013

If the choices given do not fit your situation, please feel free to write in one that does.

## Exercise during pregnancy: knowledge and beliefs of medical practitioners in South Africa: a survey study

Cleaning a rug once burned about 200 calories, while activating a robo-vac uses about 0. The knowledge and attitude of obesity and bariatric surgery has been seldom studied; thus, this study is important to investigate the knowledge and attitudes towards obesity and bariatric surgery in Chinese nurses.

## Attitudes and Barriers to Exercise in Adults with Type 1 Diabetes (T1DM) and How Best to Address Them: A Qualitative Study

Cross-validation of item selection and scoring for the SF-12 Health Survey in nine countries: results from the IQOLA Project. Brief periods of light intensity activity were proportionally less on work days compared to non-work days, and also during work hours on work days compared to non-

work hours on work days and total non-work time. The last part of the questionnaire was the basic demographics of the participants, including gender, age, height, weight, education background, hospital level, and department.

#### **Attitudes and Barriers to Exercise in Adults with Type 1 Diabetes (T1DM) and How Best to Address Them: A Qualitative Study**

The authors analyzed the first five interviews together, then they worked independently to analyze the data to help in the verification process. Studies about the effect that provider recommendations have on exercise behavior have generally shown that patient attitudes are responsive to exercise advice from healthcare providers.
