Do Family Interventions Improve Outcomes in Early Psychosis? A Systematic Review and Meta

The study had National Research Ethics Service NRES approval and all participants gave their written, informed consent to participate.

Frontiers

In this Research Topic, we saw from the interesting work of the specific impact psychosis exerts on siblings of first episode psychosis FEP relatives and how carer outcomes can be impacted. Children born with the genetic mutation known as 22q11.

Frontiers

However, the interaction between change in GAF scores over the follow-up period and outcome group remained significant after covarying for the change in total symptom score, suggesting that changes in global functioning are not entirely explained by changes in the severity of symptoms. Poor functional outcomes in UHR cohorts have recently been associated with a long duration of high-risk symptoms before presentation and poor neurocognitive performance, especially on tasks of verbal memory and fluency. Eric Davis is Visiting Senior Research Fellow at the University of West of England UWE and a consultant clinical psychologist with the Gloucestershire Partnership NHS Trust.

Functional Outcome in People at High Risk for Psychosis Predicted by Thalamic Glutamate Levels and Prefronto

Incorrect responses were defined as pass responses, as were words that were proper nouns, repetitions or grammatical variations of previous words. Lin JS, O'Connor E, Rossom RC, Perdue LA, Burda BU, Thompson M, Eckstrom E. There is a need to evaluate their application with carer sub groups e.

Frontiers

Furthermore, a recent follow-up study in an extended sample of the UHR cohort reported here suggests that low thalamic glutamate levels at baseline were associated with a longitudinal decline in global functioning. Furthermore, longitudinal studies have shown that initial UHR classification is associated with persistent and long-standing functional difficulties in a subset of cases. The topic is designed to promote discussion and inform effective clinical, service and research efforts to support families and their relationships once they are affected by psychosis.
