### Sponge Iron

The quantity of initial furnace charge materials is to constitute a substantial percentage of the rated capacity of the furnace. In layman's language, all steel other than mild steel fall under the category of special steel.

### World's First Hydrogen

Unlike , which is almost pure metal, DRI contains some siliceous if made from scrap, not from new iron from direct reduced iron with natural gas , which needs to be removed in the steel-making process. PENCIL INGOTS: small ingots in Kgs produced in mini-steel plants.

### The reasons for the success of Sponge Iron Industry in India

IRON MAKING: Iron making is the process of Reduction of iron ore using the relevant reducing agent Reductant. The systems can control more than one furnace and be part of a larger network controlling all the functions of the melting shop.

### World's First Hydrogen

All of this oxidation produces a highly reactive FeO slag. The potential cannot be underestimated.
