How drugs affect your body

Scientists estimate that genes, including the effects environmental factors have on a person's gene expression, called epigenetics, account for between 40 and 60 percent of a person's risk of addiction. But they are still drugs: they act as stimulants or sedatives, and too much can kill you.

Why You Need to Take Your Medications as Prescribed or Instructed

Clinically known as substance use disorder, drug abuse or addiction is caused by the habitual taking of addictive substances.

How Medicare Part D Step Therapy Helps You Save on Prescription Drugs

The teenage years can be a time of experimentation for young people, regardless of parenting skills and influence. Illicit drug use causes a significant burden to the Australian economy. How long it lasts, and how bad it is, depends on the type of drug stimulant or depressant and your age, sex and tolerance.

What are the effects of taking drugs?

Introducing drugs during this period of development may cause brain changes that have profound and long-lasting consequences.

How drugs affect your body

If young people are unhappy and unable to express their disappointments, failures, or anger, they may start using drugs as a way of self-help. What environmental factors increase the risk of addiction? These can influence mood, behavior and other cognitive function.
