Review: The Paleobiological Revolution

The Fossil Record: Biological or Geological Signal? Beginning in the 1970s, a group of influential paleontologists, including Stephen Jay Gould, Niles Eldredge, David Raup, Steven Stanley, and others, aggressively promoted a new theoretical, evolutionary approach to the fossil record as an important revision of the existing synthetic view of Darwinism. What is more important is the broader context in which Smith made his statement. Readers will no doubt recognize a number of trends that run throughout these sections.
