### equatorial plasma bubble: Topics by Science.gov

Two Langmuir probes are kept in the ambient plasma to measure the floating potential fluctuations in different positions within the system, viz. In this paper we present high spatio-temporal imagery of equatorial plasma bubbles EPBs from an imaging system called the Large Aperture Ionospheric Structure Imager LAISI, which was specifically designed to capture short-integration, high-resolution images off-region

recombination airglow at  $\lambda$ 557.
