## A Guide to the Native Mammals of Australia by W.D.L Ride

The musky rat kangaroo is one of the few marsupials active during daylight hours, and is found in the tropical rainforests of far north Queensland, where it is an important disperser of seeds. However, this is an incredibly well-illustrated and helpful guide for field use.

## List of mammals of Australia

The cover drawing looks like a photograph, it is so realistic. Three of the world has a higher proportion - about half the world's mammal species are rodents, but they entered Australia relatively recently, when Australia and New Guinea drifted close enough to south-east Asia for temporary land bridges to form.

## A guide to the native mammals of Australia (1970 edition)

This book provides concise and accurate details of the appearance, diagnostic features, distribution, habitat, and key behavioral characteristics of all mammals known to have occurred in Australia. This fully revised and updated edition of A Field Guide to the Mammals of Australia is the only comprehensive guide to identifying all 379 species of mammals known in Australia. These mainly herbivorous animals include about 80 species, the most well-known are mammals including kangaroos, koalas, wombats and possums.

Rodents About a quarter of all native Australian mammal species are rodents which comes as a surprise to many suburban Australians who usually only see the introduced rodent species. See also Dolphins are often readily seen from the coast or a boat.

## Mammals of Australia

However, there is no response from them since then. Whales and dolphins Several species of dolphin inhabit waters around Australia, the most common being the bottle-nosed dolphin. Several shales migrate along the Australian coasts in winter, coming up from Antarctica to breed in warmer waters.

Overall, it is a great guide for the money! There have also been fossilised platypus different species to today's found in Argentina - not surprising as Australia, Antarctica and Australia were still joined during the Cretaceous. The longest established is the dingo, brought to Australia perhaps 4000 years ago by Indonesian traders. Overall, it is a great guide for the money! So I sent an email enquiry to the Oxford University Press on 16 DEC 2014.
