In addition to veneering and the new system of construction it involved, an to the establishment of the trade of furniture making came from the increasing market demand provided by the growing affluence of the 17th and 18th centuries. The grain in wood creates a structure with varying character, which in itself provides a natural ornamental surface, in which patterns can be formed by means of precalculated. A completely revised edition, covering every period and development to the present, the designers and makers, the woods and other materials, the architecture and decoration.

As ordinary beds in private homes or hotels, they could be decorated with brass ornaments such as big knobs screwed onto their posts.

Encyclopedia of Furniture Making by Ernest Joyce (Hardcover) for sale online

The majority of pages are undamaged with minimal creasing or tearing, minimal pencil underlining of text, no highlighting of text, no writing in margins. The characteristic feature of laminated board is that the veneer on both sides encloses a wooden board composed of narrow strips of wood glued together on edge.

1992 Book, Collector's Encyclopedia of American Furniture, Vol 2, Swedberg

It would hardly be possible to achieve such a surface by using solid wood, partly because of the expense, partly because of its brittleness, and partly because the grain can never be shown off to its best advantage when the timber is cut into solid boards. Condition: Used - Very Good. In the new system of construction, plain, flat parts are together and then veneered.

The Encyclopedia of Furniture: Third Edition

Wood, if stored under favourable conditions, is durable, and pieces of furniture from the oldest civilizations—Egypt, for example—are still.

Furniture industry

In the , simply constructed demanded extensive use of iron bands to provide extra strength, and the ends of these bands were cut to form decorative shapes. Dust Jacket Condition: Very Good.

Furniture

Because they could be easily folded up, they were much in demand as camp beds; one used by Napoleon at is a famous example. Finally, since , various plastic materials have been used quite extensively in the construction of chairs with seats and backs molded in one piece and provided with a metal base. In Victorian England, a material made of paper pulped with glue and other additives was used to make such items of furniture as fire screens, small tables and chairs, and clock cases.
