The ICT Development Index (IDI): conceptual framework and methodology

As described earlier, the study sample was selected to be never married at baseline, and so levels of marriage are equal to the incidence during 2008. If they cannot be reached over the phone, we attempt to find them in person by going to their home area. By using a large administrative source we are also able to establish that the program improved both male and female labor market outcomes by a similar amount--a result that was not apparent with the smaller evaluation sample.

Chapter 16 Schools, Teachers, and Education Outcomes in Developing Countries

Elements of a decent standard of living include food, water, housing, education, health care, transport, clothing, and other essential needs including provision for unexpected events.

United Nations Population Division

His preliminary view from this work is that the social effects of education, in particular on fertility and marriage, are substantial, even when there is no learning in schools. These necessities and conveniences are: not only commodities which are indispensably necessary for the support of life, but whatever the custom of the country renders it indecent for creditable people, even of the lowest order, to be without. It excludes subscriptions via data cards or USB modems, subscriptions to public mobile data services, private trunked mobile radio, telepoint, radio paging and telemetry services.

School entry age and educational attainment in developing countries: Evidence from China's compulsory education law

The only striking result is that among those who have a job, scholarship winners are much less satisfied with it a decline of -0. Data are obtained by countries through national household surveys and are either provided directly to ITU by national statistical offices NSOs , or obtained by ITU

through its own research, for example from NSO websites. To address these issues, this manual develops principles and guidelines for measuring prevailing wages so that they can be compared to a living wage.

Chapter 16 Schools, Teachers, and Education Outcomes in Developing Countries

Funders of these studies include GLWC members, major multinational corporations in garments, outdoor wear, supermarkets, seafood, and electronics including EILEEN FISHER, Lidl, Superunie, Foppen, and a number of others that want to keep their names confidential and the Dutch and German governments. Surprisingly, none of these three estimates is statistically significant.

The ICT Development Index (IDI): conceptual framework and methodology

As discussed , we think that effects are likely to vary significantly in different contexts and with different interventions, and we are therefore cautious about making general recommendations of education programs based on this evidence. We are aware of only two studies that use a randomized trial to test the effects of an education intervention on health outcomes. Finally, 6 the special focus must be given to the encouragement of local organizations to conduct the specialized training programs to promote innovation activities.

The ICT Development Index (IDI): conceptual framework and methodology

Overall, the evidence, while based on only two studies, is generally supportive of the common sense notion that longer school days increase student learning. Using UNESCO-UIS data, this paper estimates the costs of internal inefficiency caused by dropouts and repetitions in primary education. Common living wage methodologies for developing countries almost always assume that there are either one or two workers per family.
