STRUCTURED PROGRAMMING VERSUS OBJECT ORIENTED PROGRAMMING	
STRUCTURED PROGRAMMING	OBJECT ORIENTED PROGRAMMING
A programming paradigm that divides the code into modules or function	A programming paradigm based on the concept of objects. An object contains data in the form of fields known as attributes, and code in the form of procedures known as methods.
Focuses on dividing the program into a set of functions in which each function works as a subroutine	Focuses on representing a program as a collection of objects which encapsulates data and operations.
Difficult to modify structured programs	Easier to modify Object Oriented programs
Main method communicates with functions by calling those functions in the main program	Objects communicate with each other by passing messages
There are no access specifiers	There are access specifiers such as private, public and protected
Data is not secured	Data is secure
Difficult to reuse code	Easy to reuse code
