Labor Productivity (Definition, Formula)

New technologies are new methods to combine inputs to produce more output, such as assembly lines or automation.

The Relationship between productivity and standard of living

Find international comparisons of labor productivity, listed under the FRED Economic database Growth Rate of Total Labor Productivity , and compare two countries in the recent past. However, a country growing at a 5% annual rate will see almost the same amount of growth—from 100 to 163—over just 10 years. The United States experienced a productivity slowdown between 1973 and 1989.

Productivity Commission
