The DepEd shall work with the CHED and TESDA to craft harmonized basic, tertiary, and technical-vocational education curricula for Filipino graduates to be locally and globally competitive.

## LITERATURE REVIEW OF THE EFFECTS OF TEACHING APPROACH ON PUPILS MEAN ACHIEVEMENTS IN BASIC SCIENCE

The implication of this theory of experience in teaching of basic science through experiential teaching approach is that learners should always be provided opportunity to be actively involved in the learning process. The major task before the teacher in employing the method is to carefully guide the learners so that the skills that will be emphasized in the course of instruction will be those that are useful to the development of the learners themselves and the society at large.

Secondly, the study revealed that the experiential teaching approach can be used to teach other subjects, outside the teaching of basic science and technology which is the focus of the present study. Because the Philippines have a variety of usable wood resources handicraft, carpentry, and furniture making are flourishing local enterprises. The size of the population was 680 senior secondary two SS II physics students.

## Livelihood Education Competencies and Employment Capabilities

The study determined if there is a difference in the attitude of physics students who have been taught with comparative, competitive and individualistic learning strategies.
