### List of lichen checklists

ABRS has published the first four lichen volumes of the Flora of Australia and maintains a comprehensive online checklist of Australian species. An undescribed species of *Lempholemma* growing on flooded deciduous tree bases in vernal pools was also discovered.

### List of lichen checklists

Unranked species reported for the second time in Canada are *Dermatocarpon muhlenbergii* Ach. It is recommended that a lichen awareness and education program be created for the park staff and visitors to highlight these rare and sensitive lichens and habitats within the park in the hope that lichens are protected through appropriate management and planning. To better understand the lichen biota of this interesting ecosystem, an inventory was conducted during several field visits from 2016—2019.

### ABRS

Sixteen species are provincially ranked as critically imperilled S1, S1S2 or S1S3 , sixteen species as imperilled S2 or S2S3 , and nineteen species as vulnerable S3 or S3S4.
