Land Biomes: Temperate Forests

They have golden colored eyes and their toes and claws are thickly covered with feathers. Northern Copperhead They have copper colored head and coppery bodies with brown or light brown colored cross bands, hence the name! Summer is a bustle of energy and life; insects are busy pollinating the next generation of wildflowers, and birds sing from every corner of the forest. What if a fire burns hot enough to turn everything into ash? In the meantime, these areas of the forests remain sunny oases of diverse plant life! During the summer months the temperature will range from 75 to 86 degrees.

Temperate Forest Wildlife

Although these threats may be worrisome, there are many things that you can do to help protect this unique biome. Over time, tree seeds from the forest make their way to the grassland and begin to sprout.

The Temperate Forest by Philip Johansson

There are some extremely small living creatures including the scorpion, ant and earthworm. It never gets really hot like in the rainforest or really cold like in the Taiga in the temperate forest.

Temperate forest

Non-natives may compete for food and habitat space, possibly threatening the native species. These are all examples of a biome at work: each member of the community benefiting from another.
