## Use of Reflective Ultraviolet Photography to Photo

Forensic Photography is an integral part of criminal investigation procedures employed by police and security forces throughout the world. When this film is developed, it is treated as any other film, and can be made into slides, prints, or enlargements. Again, objects of medium-range photographs must be a fair and accurate representation of what is seen.

Much of the work is routine, but photographing crime scenes and road traffic accidents, or visiting patients in the hospital, can be emotionally distressing.

## Use of Reflective Ultraviolet Photography to Photo

Crime scenes can be major sources of physical evidence that is used to associate or link suspects to scenes, victims to scenes, and suspects to victims.

## Forensic photography

Photos include contextual imagery to show evidence in context, close-up imagery to show very fine details like fibers, hair and specks of blood,

and wide-shot imagery to accurately depict the entire area of the crime scene. See the next section to follow.

### **FBI Crime Scene Photographer Opens Up About Job**

Forensic photography paves the way for justice, with the help of technology advances and recording of visuals are used as evidence. SOCO may also make audio recordings as to their findings while they go. I suggest a holder that allows the filter to be placed on the camera quickly and without moving the lens, since the camera will be focused, and the subject sitting still.
