## Feminizing hormone therapy

The and progestogen was first used in transgender women by 1977. Throughout the reproductive years, some women note swelling of the breast around the latter part of each menstrual cycle before the onset of menstruation. In addition, studies have found that hormone therapy in transgender women causes performance in cognitive tasks, including visuospatial, verbal memory, and verbal fluency, to shift in a more female direction.

## The effect of estrogen on tendon and ligament metabolism and function

Estrogen stimulates the nipples to grow, mammary terminal duct branching to progress to the stage at which ductules are formed, and fatty stromal growth to increase until it constitutes about 85% of the mass of the breast. Also unaffected is the prominence of the. In , limited reports of have been received.
