Types of Woodpeckers with Pictures for Woodpecker Identification

Please contact the office by telephone if

National Forests and Grasslands in Texas

A preference is shown for decayed wood for nesting, though sound wood is also utilized. Although they sometimes evict smaller Red-cockaded Woodpeckers from nest sites, Red-bellieds themselves are more often displaced by European Starlings. A master of its niche, this woodpecker has even come to exploit this characteristic of the longleaf as a defense mechanism—hence, the sap-plastered trees around me.

woodpecker

Members of this family can walk vertically up tree trunks, which is beneficial for activities such as foraging for food or nest excavation. Range: The most widely distributed woodpeckers in North America are the hairy woodpecker and northern flicker. In a global survey of the risk of faced by the various bird families, woodpeckers were the only bird family to have significantly fewer species at risk than would be expected.

Pileated Woodpecker (U.S. National Park Service)

Usually, pileated woodpeckers excavate their large nests in the cavities of dead trees. New York: American Museum of Natural History. Learn how to discourage this on our page.
