Cavities

Carbohydrates provide a good environment for bacterial growth. The acid produced leads to a loss of calcium and phosphate from the enamel, and this process is called demineralisation.

Dental Caries

And chew sugar-free gum to stimulate the salivary flow that flushes out bacteria and food debris and neutralize acids that are produced by oral bacteria.

Dental caries. An infectious and transmissible disease

Dental Caries Complications In the early stage, dental caries tooth decay affects only tooth enamel. With poor oral hygiene, teeth often develop a so-called secondary caries.

Dental Caries: Causes, Progression, & Treatment [Pictures]

Right brushing habits brushing twice daily , and regular dental check-ups help avoid occurrence of dental caries. Dental caries is not hereditary but occurs frequently in a family. Causes of dental caries Saliva The amount and composition of saliva influence the spread of dental caries.
