Survey to assess procedures for handling cytotoxic drugs in academic research laboratories in the United Kingdom

Note: perform hand hygiene between steps if hands become contaminated at any point. Evidence for continued risk of occupational exposure is abundant; however, nurses' use of the recommended precautions is not universal.

Safe Handling of Hazardous Drugs

Section: Appendix 2: Symbols for Waste Classification
Context: Symbols taken from NZS 4304:1990
Section: Appendix 4: Selected Reading and Bibliography
Context: Listed in the Bibliography
NZS 5433:1988 Code of practice for the transportation of hazardous substances on land
SUPERSEDED
Section: 6. The administering of drugs to patients is generally carried out by nurses or physicians injecting the drug into the IV line, clearing air from the syringe or infusion line, and leakage at the tubing, syringe, or stopcock connection present opportunities for both skin contact and aerosol generation leading to respiratory exposure. We are aware of incidents where nurses, ridding syringes of air, inadvertently sprayed their eyes with a drug aerosol.

Guidelines for Cytotoxic (Antineoplastic) Drugs

Safe handling practices of cytotoxic drugs: The results of a chapter survey. Occupational Safety and Health Administration.

ASCO/ONS Chemotherapy Administration Safety Standards

A-18 OSHA Instruction PUB 8-1.

Safe Handling of Hazardous Drugs

List work practice guidelines that will limit exposure of workers to CDs, and the equipment necessary to carry out these practices properly.
