Mapping the Coal Ash Contamination

Consequently, we cannot at this time determine the safety of drinking water near the hundreds of coal ash dumps covered by the CCR Rule. Waste coal is usually composed of mixed coal, soil, and rock mine waste.

Energy Fuels to evaluate rare earth oxide potential from coal

Both physical and chemical beneficiation techniques to upgrade the iron content of the magnetic fly ash were tested; chemical beneficiation using high-temperature NaOH leaching was found to be the most effective method.

Following this phase, the DOE will conduct a merit evaluation and determine whether to award the funding for the development of a feasibility study. You might have seen this blog post from a few days ago, in fact, about Nevada customers who apparently overpaid for wind power. Conceptual process flowsheets were developed for three of the processes that appear to have merit: lime-soda-sinter, salt-soda-sinter--nitric acid leach, and nitric acid leach.

Coal Ash Recycling: A Rare Opportunity

Prog Energy Combust Sci 36 3 :327—363.

Evaluation of potential processes for the recovery of resource materials from coal residues: Fly ash (Technical Report)

The agency has become so politicized over the last 20 twenty years that it is now a barnacled thing—clumsy to the point of goofiness. The program, called the , was started in 2001 with a goal of increasing the recycling of coal ash for use in other applications. The page then goes on to tout what the TVA would like people to think of as the protean benefits of recovered coal ash, which can be used as an additive in the manufacture of concrete and wallboard.

Coal Ash Reuse

Nevertheless, REEs are increasingly required for a range of modern applications in defense and renewable energy technologies and in commercial products, primarily as magnets, batteries, and catalysts. Energy Fuels has been carrying out substantial work over the past year to explore the potential for implementing a commercial rare earth recovery and processing program at our White Mesa Mill pictured.
