## The Betrayal of Health: The Impact of Nutrition, Environment, and Lifestyle on Illness in America

Journal of Occupational Psychology, 63, 151-165. Fristad, PhD, of the Ohio State University Wexner Medical Center.

### The Hartford Courant

Longitudinal studies in organizational stress research: A review of the literature with reference to methodological issues. Applied Psychology: An International Review, 46, 175-198. The demand-control model posits that it is the combination of high psychological demands and low level of control low decision authority and skill utilization that leads to high physiological strain among workers and hence to the onset of disease such as hypertension and cardiovascular disease.

### The Hartford Courant

This view leads us to focus on foods we should include rather than foods to exclude. Society and the adolescent self-image.

## THE BETRAYAL OF HEALTH

Healthy work: Stress, productivity, and the reconstruction of working life. Although much of the research is still limited to single-case studies and observational studies—with researchers themselves calling for more rigorous, more expansive research designs and larger, more diverse research samples—it offers tantalizing hints at the potential for new prevention strategies and treatments for people with a wide range of psychological problems. Among adults, social support predicts lower levels of HPA axis and sympathetic nervous system reactivity in laboratory-based challenge paradigms.

## The word as scalpel : a history of medical sociology

Americans' changing lives: Waves I and II, 1986 and 1989 Computer file, ICPSR version. In the Panel Study of Income Dynamics, for example, only a weak association was seen between post-tax family income and mortality among post-retirement-age subjects, while measures of wealth

continued to indicate a strong association with mortality risk. From role-playing to role-using: Understanding role as resource.
