## Canadian sentinels watch for streaking meteors

The network now includes several mainland sites to enhance coverage capabilities. This change in trend was most noticeable in the east component of the magnetic field at European observatories, but it was evident at almost all the world's observatories, and it happened at roughly the same time everywhere.

## Observatories In Canada

NASA, PDCO and the accompanying network of partner telescopes have not found an imminent threat to Earth yet.

## Adaptive separation of regular and irregular magnetic activity for K indices

Data from the observatory are used for a wide variety of scientific purposes, both pure and applied. This is comparable with values carefully determined by highly skilled observers.

## Adaptive separation of regular and irregular magnetic activity for K indices

The figure shows a decrease of over 4000 nT during the 20th century. Auszug aus Sprechfunk für Küstenschiffahrt.
