Finlay, Population and Metropolis, pp.

Power and Professions in Britain, 1700

In the end, medicine could be as simple or complicated as one wanted to make it; everyone could be a physician by making remedies, diagnosing illnesses and offering advice on regimen. This shed at once a new light on the whole subject as to the source of energy in the nerve- centres, because knowing as we did from our other experiments that impulses avoid pass up most easily the posterior side of the spinal cord, and would only issue through the nerve-centres in a very diminished degree, it was clear that the field of conjunction must afford a considerable block, and that therefore if there was an overflow down the posterior roots, that overflow could only be reasonably surmised to come from a source of

energy situated in the afferent side of the centre. While the professions consolidated their powers, so consumer fears were heightened that these potent authority figures were all leagued together in a conscious conspiracy against the public.
