Don Mackay

Repeating experiments of others, in addition to his own, accounting for the mass changes with reaction vessels and mass flows entering and exiting, allowed him to make definitive statements about otherwise subjective chemical reactions.

The environmental fate of polybrominated diphenyl ethers (PBDEs) in western Taiwan and coastal waters: evaluation with a fugacity

The first application of mass transfer to environmental systems was done in 1925 to river reaeration oxygen uptake by civil engineers who were concerned about oxygen depletion in rivers impacted by oxygen-demanding sewage Streeter and Phelps, 1925. The low TE suggests that ATE is not deposited to a high degree to remote regions.

Don Mackay

Environmental Modelling & Software

TBB and TBPH were determined in ring-billed gulls Larus delawarensis collected from Deslauriers Island in 2010 Gentes et al. Brominated Flame Retardants BFR in the Nordic Environment.

Don Mackay

The median metabolic rate constant k M for TBB was first estimated as 0. Ottawa ON : Government of Canada.

Biodegradation models were also used to contribute to the weight of evidence regarding environmental persistence.
