## MEDS6013 Flashcards by Rebecca Munjee

Phenomenology Phenomenology is a research methodology which has its roots in philosophy focusing on the lived experience of individuals. Educational research aims at maintaining or adding meaning to educational thinking and practice. Here, the phenomenological orientation toward the lived concrete, situated experience comes into play.

## Epistemology and Metaphysics for Qualitative Research

This is an enormously important work. To address this question, they interviewed the families of 10 teenage suicide victims in their homes in rural Sweden.

## Frontiers

The characterization of their differences is helpful toward clarifying what is meant by phenomenological psychology.

## What is Qualitative Research?

Hermeneutics and phenomenology have their own distinct history. A coding approach and the use of CAQDAS is a possible analysis choice. Important to note is that qualitative research, as described above, refers to empirical research, not to basic or theoretical investigations.

## Phenomenology in Educational Research

However, Rockmore goes further to explain, Husserl depends on Kant in a number of ways: for example, his concern for philosophy as a rigorous science, his conception of phenomenology as transcendental idealism, the relation of transcendental phenomenology to the life-world, and, above all, the problem of psychologism. Ethnomethodologists conduct their studies in a variety of ways focusing on naturally occurring data. This is referred to as the hermeneutic cycle.

## **Qualitative Research Methods & Methodology**

No, because this core philosophical commitment already constitutes the basis of a transcendental paradigm in phenomenological psychiatry and psychology. Further readings: McNaab, David E.

### **What is Qualitative Research?**

Thousand Oaks, CA: Sage Publications. Variation and commonality in phenomenographic research methods. Cartesian Meditations, translated by D.

## **Qualitative Research Methods & Methodology**

For example, on the one hand, though some thing may be experienced differently by different humans, it is still the case that there is some thing to be experienced.
