RMS Aquitania: The Ship Beautiful by Mark Chirnside

New public rooms were constructed for this class, although tourist third cabin and second class would merge to become 'tourist' by late 1931. Accordingly, eliminated this feature on Titanic and built additional, enlarged staterooms with en-suite bathrooms.

Great Ocean Liners

No speed test was carried out. The vessel was retired and scrapped in 1950 in Scotland, thus ending an illustrious career which included steaming 3 million miles in 450 voyages.

RMS Olympic

Construction of Olympic began three months before Titanic to ease pressures on the shipyard. As the astern turbine coupled with the intermediate-pressure ahead turbine was a high-pressure turbine, it was a duplicate of the high-pressure astern turbine on the port wing shaft. At the subsequent inquiry the blamed Olympic for the incident, alleging that her large displacement generated a suction that pulled Hawke into her side.

Great Ocean Liners

The two main condensers were of Weir's uniflux type, constructed by Messrs.

RMS Aquitania

Another source posits that they are Titanic's remaining lifeboats having been brought back to Southampton by Olympic. Olympic, like Titanic, did not carry enough lifeboats for everyone on board, and so was hurriedly equipped with additional, second-hand collapsible lifeboats following her return to Britain. Binks, the ship failed to turn in time and sliced through the smaller vessel, which broke apart and sank.

Great Ocean Liners

Until 1933 Olympic's were HSRP and her was MKC. It was subsequently discovered that U-103 had been preparing to torpedo Olympic when

she was sighted, but the crew were not able to flood the two stern torpedo tubes. In 2000, purchased some of Olympic 's original wooden panels to create the RMS Olympic Restaurant on board their new cruise ship.,
