How to rescue a drowning victim using a reaching assist or a shepherd's crook

Work is performed according to accepted best practice principles of aquatic rescues, relevant legislation and organisational policies. To Jeff Bloom, Guy McNally and Nick Rose for the original concept and engineering of the Wordfit System for automatic ADR synchronization, and to John Ellwood and Jonathan Newland for the engineering and development of VocALign and Revoice Pro. To Sanken Microphone Company Limited for the original innovation and continuous refinement of the Sanken COS-11 series of miniature lavalier microphones.

Family rescued after flipping tube on Penticton channel

If you are not sure you can rescue the victim without putting yourself in danger, then go for help instead. If you had to wrap the hook around them, they might not notice that they are being rescued, so when you get them near the side, push the crook away from them, lie down and do a reaching assist as described above.

5 Steps for Rescuing an Ice Victim

If a victim is close enough, a reaching assist can be used to help the person out of the water. If you can reach the victim without getting on the ice, that's ideal.

5 Steps for Rescuing an Ice Victim

Recommended ages 12-14 The GuardStart program involves a significant amount of physical activity.
