ELECTROPHILIC SUBSTITUTION It is apparent from simple valence bond considerations as well as from calculations of n-electron density, 9-12 that isoindoles should be most susceptible to electrophilic attack at carbon 1. Bornstein, F e t r a M o n Letters p.

Thesis, University of East Anglia, 1965. A compound described as 2-methyl-3-nitroindole 374 was said to be formed in low yield by the action of ethyl nitrate on 2-methylindole magnesium iodide.

ADVANCES IN HETEROCYCLIC CHEMISTRY V10, Volume 10

For the formation of haloalkoxybenzofuroxans from nitrobenzofuroxans, see Section VII, B.
