Internetworking: Building Internet

On the Harvard Mark I, for instance, restarting would involve separately turning on multiple electric motors and then pressing a button marked MAIN SEQUENCE. Usually the machine spent more time idle than computing. In some contexts, an occasional incorrect result is not as much of a problem as overall throughput.

Internetworking

The programmer then checked progress frequently to estimate when he would reach the top. There was one other trigger that turned me to the ARPAnet. Normally the necessary equipment would enter the market slowly; changes from the expected would be small, people would change their ways of doing things a little at a time, and only gradually would their accumulated changes create markets for more radical versions of the equipment.

Innovations in Smart Cities and Applications

We do not speak of isolated clever tricks that help in particular situations. Mostly making things faster, cheaper, more memory-consuming, smaller, cheaper, dramatically less efficient, more secure, and worryingly glitchy. Increased capability in this respect is taken to mean a mixture of the following: more-rapid comprehension, better comprehension, the possibility of gaining a useful degree of comprehension in a situation that previously was too complex, speedier solutions, better solutions, and the possibility of finding solutions to problems that before seemed insoluble.

Innovations in Smart Cities and Applications

Lots of really important algorithms and data structures have been invented though usually not implemented in practice. Because the systems allowed you to share files, you could find that so-and-so was interested in such-and-such and he had some data about it.
