# Building family practice skills - methods, strategies, and tools

Thomson Brooks/Cole - One strategy for each ACSF (LLN) skill

Description: This book presents a transtheoretical response system framework for understanding family practice. This framework organizes theoretical information, assessment protocols, skills, and intervention strategies into a learning structure that helps students understand myriad client situations and the intervention strategies that would be most appropriate for those specific situations. Using this over-arching structure, and focusing on two systems of response-- action systems (how family members behave and interrelate) and processing systems (how family members interpret/feel) - [the author] guides readers through the five parts of the book with the goal of building holistic family intervention skills.
